Preface	xiii
1 Introduction	
1.1 Purpose and Scope	1-1
1.2 Organization	1-1
1.3 Requirements Terminology	1-2
2 Description	
2.1 Accelerated Life Testing Methodology	2-1
2.2 Service Life of Batteries	2-2
2.3 Avoidance of Premature Failures	2-3
2.4 Temperature Dependence of Electrochemical Processes	2-3
2.4.1 General Benchmarks	2-3
2.4.2 Arrhenius Equation	2-7
2.4.3 General Electrochemical Parameters	2-9
2.4.4 Grid Growth as a Failure Mode	2-9
2.4.5 Positive Grid Corrosion	2-12
2.4.6 Water Vapor Permeation through Battery Cases	2-12
2.4.7 Oxygen Evolution from PbO ₂ Electrodes	2-16
2.4.8 Other Temperature Dependent Subassemblies	2-16
2.5 Log-Normal Failure Modes and Reliability	2-17
3 Requirements	
3.1 General Test Requirements	3-1
3.2 Testing Time and Temperature Requirements	3-1
3.3 Large Scale Test Requirements	3-2
3.4 Small Scale Test Requirements	3-4
3.5 Cell Selection for Testing	3-5
3.6 Temperature Sensitivity of Rectifiers	3-5
3.7 Float Voltage Constraints	3-5
3.8 Accelerated Test Conditions - Humidity	3-6
4 Quality Assurance by Accelerated Testing	
Appendix A: References	
Note	A-2
To Contact Telcordia Customer Service or to Order Documents	A-2
To Order Documents From Within Telcordia (Employees Only)	A-2
To Request Telcordia Testing Services	A-2

List of Figures

Figure 2-1	Benchmark Test on Arrhenius Plot	2-5
Figure 2-2	Linear Interpretation of Benchmark	2-6
Figure 2-3	Dependence of Current on Temperature	2-8
Figure 2-4	Grid Growth as a Function of Temperature	2-11
Figure 2-5	Vapor Pressure of Sulfuric Acid At Various Temperatures	2-15
Figure 2-6	Log Normal Failure Distribution for a String	2-20
Figure 3-1	Log Normal Failure For Sets of Batteries	3-3

List of Tables

Table 3-1	Plotting Points on Log-Normal Paper for Sample Size of Five (n)	3-2
Table 3-2	Accelerating Factors For Various Temperatures Using 14.5 kcal/mole	3-4
