

Table of Contents

1 General

1.1 Reasons for SR1421 Reissue(s)	1-1
1.1.1 Reasons for SR-1421, Issue 5	1-1
1.1.2 Reasons for SR-1421, Issue 4	1-4
1.2 Coordination Between Codes, Standards, and Other Agreements	1-5
1.3 Company Terminology	1-6

2 General Safety Precautions and Guidelines

2.1 Working in the Vicinity of Power Conductors	2-1
2.2 Identifying Power	2-4
2.2.1 Arc Flash Risk Assessment	2-6
2.3 Using Truck-Mounted Equipment Near Power	2-6
2.4 Placing or Removing Poles Near Power	2-8
2.5 Placing or Removing Suspension Strand and Cable Near Power	2-9
2.6 Visual Pole Inspection	2-9
2.7 Conditions Requiring No Testing or Supplemental Support	2-11
2.8 Buried Plant Precautions	2-11
2.9 Depth of Buried Plant	2-13
2.10 Separation From Gas and Other Fuel Lines	2-14
2.10.1 Steam Lines	2-15
2.11 Safety Considerations	2-15
2.12 Manholes	2-16
2.13 Fiber Optics	2-17
2.14 Inspection Checklist	2-18
2.15 Make-Ready Survey Checklist	2-20

3 Clearances

3.1 General	3-1
3.2 Clearances Between Communication Facilities	3-2
3.2.1 Hierarchy on Pole	3-4
3.3 Clearance Between Power and Communication Facilities	3-5
3.3.1 2011 Commentary on Congested Poles	3-5
3.3.2 Clearances Between Power and Communications Facilities	3-6
3.3.3 Commentary - Supply Equipment in Communications Space	3-10
3.4 Clearance Between Power and Communication Cables on Different Poles	3-11
3.5 Clearance Between Power and Communication Conductors Along Span	3-12
3.6 Clearances Above Roadways, Rails, and Other Structures	3-16
3.6.1 Clearance Example	3-18
3.7 Communication Antennas	3-19
3.7.1 Basic Clearances	3-20
3.7.2 Placement Concerns for Antenna and Associated Equipment	3-20
3.7.3 Clearances for Antenna Structures, Cables, and Associated Closures	3-21
3.7.4 Radiation Emissions	3-22
3.8 Clearance of Supporting Structures (Poles) From Other Objects	3-23
3.9 Climbing Space	3-23

3.9.1 Current Trends 3-24

4 Strand - Description and Stringing Tension

4.1 General 4-1

4.2 Strand Description 4-1

4.3 Stringing Tension 4-3

4.4 Methods of Obtaining Stringing Tension 4-4

4.5 Tensioning and Sagging of Cable Strand 4-5

5 Pole Line Hardware - Description and Use

5.1 General 5-1

5.2 Suspension Clamps 5-1

5.3 Suspension Bolts 5-3

5.4 Suspension Screws 5-5

5.5 Reinforcing and Support Straps 5-7

5.6 Reinforcing Links 5-10

5.7 Table of Hardware for Attaching Suspension Strand 5-12

5.8 Guy Hooks 5-13

5.9 Thimble Eye Bolts 5-17

5.10 Guy Straps 5-20

5.11 Guy Clamps 5-20

5.12 Guy Grips ("B" Strand Grips) 5-23

5.13 Strandvises 5-26

5.14 Pole Attachment Illustrations 5-27

5.15 Non-Wood Poles 5-31

5.15.1 Concrete Poles 5-31

5.15.2 Steel Poles 5-31

5.15.3 Fiberglass or FRC Poles 5-31

5.15.4 Hardware for Non-Wood Poles 5-32

5.15.5 Guys 5-32

5.15.6 Holes and Drilling 5-35

5.15.7 Lag Screws and Support Straps 5-35

5.15.8 Banded Hardware Attachments 5-36

6 Guying

6.1 General 6-1

6.2 Types of Guys 6-1

6.3 Determining Lead and Height 6-6

6.4 Determining Pull 6-8

6.5 Pull Finder Description 6-9

6.6 Pull Finder Use 6-10

6.6.1 To Measure Pull 6-10

6.6.2 To Bisect the Angle 6-11

6.7 Determining Guy Strand Size 6-13

6.7.1 Dead-End Poles 6-16

6.7.2 Corner Poles 6-19

6.7.3 Sidewalk Anchor Guys 6-21

6.8 Grounding and Bonding of Guys 6-24

6.9 Non-Wood Poles	6-24
7 Insulating Guys	
7.1 General	7-1
7.2 Sizes and Ratings of Strain Insulators	7-1
7.3 Locating Insulators	7-2
7.4 Methods of Installing Strain Insulators	7-6
8 Anchors and Guy Rods	
8.1 General	8-1
8.2 Field of Use	8-2
8.2.1 Average Soils	8-2
8.2.2 Rock Formations	8-2
8.2.3 Swampy Areas	8-2
8.3 Description of Guy Rods (With Expanding Anchors)	8-2
8.4 Expanding Anchors	8-4
8.4.1 Installation	8-5
8.5 Screw Anchors	8-8
8.6 Toggle Anchor and Guying System	8-13
8.7 Adding Eye to Existing Guy Rod	8-15
9 Suspension Strand - False Dead-Ending and Slack Span Construction	
9.1 General	9-1
9.2 Wrap-Type False Dead-End	9-1
9.3 False Dead-End Strandwise	9-3
9.4 Guy Clamp False Dead-End	9-5
9.5 Strandwise and Guy Clamp False Dead-End	9-6
9.6 Strand String Tension	9-8
9.7 Constructing the Slack Span	9-9
10 Bonding and Grounding for Aerial Plant	
10.1 Background	10-1
10.2 General	10-2
10.3 Methods of Bonding and Grounding	10-3
10.4 Grounding Guys	10-10
10.4.1 Self-Supporting Cable	10-11
10.4.2 Guys Not Electrically Connected Through Guy or Suspension Bolt	10-13
10.5 Bonding and Grounding Where There Is No Access to Power MGN System	10-14
10.5.1 Bonding and Grounding Where Access to Power MGN System Is Denied	10-16
10.6 Bonding Metallic Components of Optical Cable to Support Strand	10-16
11 Aerial Cable and Guy Identification Markers	
11.1 General	11-1
11.2 Description	11-1
11.3 Installation of Markers	11-3

12 Pole Testing and Inspection

12.1 Pole Testing Prior to Work Operations	12-1
12.1.1 Congested Poles	12-3
12.2 Conditions Requiring No Testing or Supplement Support	12-4
12.3 Physical Testing Techniques for Examining Poles	12-5
12.3.1 Sound Test	12-5
12.3.2 Prod Test	12-5
12.3.3 Prod Test - Below Ground Line Inspection	12-5
12.3.4 Hand Line or Pike Test	12-6
12.3.5 Consequences of Physical Tests	12-6
12.4 Measuring Extent and Effect of Decay	12-7
12.4.1 Internal Examination of Pole - Drilling and Boring	12-7
12.4.2 Wood Pole Decay Patterns	12-8
12.4.3 Deductions for Defects	12-9
12.4.3.1 Hollow Hearts	12-9
12.4.3.2 Enclosed Pockets	12-11
12.4.3.3 Exposed Pockets	12-12
12.4.3.4 Woodpecker Damage	12-13
12.4.4 Critical Pole Section and Required Circumferences	12-13
12.4.4.1 Critical Pole Section	12-14
12.4.4.2 Minimum Circumference	12-15
12.5 Tags for Defective Poles	12-15
12.5.1 General	12-15
12.5.2 Tag Descriptions	12-16
12.6 Wooden Pole Inspection Programs	12-16
12.6.1 Training	12-18
12.6.2 Visual and Physical Tests	12-18
12.6.3 Documentation	12-19
12.7 Non-Wood Poles	12-20
12.7.1 Visual Inspection	12-20

13 Pole Strength Requirements

13.1 General	13-1
13.2 Wood Pole Class Loads (ANSI O5.1)	13-2
13.3 NESC Storm Loading Requirements	13-3
13.4 Overload Factors and Strength Factors	13-6
13.5 Grade of Construction	13-7
13.6 Application	13-8
13.7 Additional Rules - Depth of Set	13-8
13.8 Conditions of Potential Concern	13-10
13.9 Non-Wood Pole Factors	13-10

14 Locations of Supply Equipment and Amplifiers In or Near the Communications Space

14.1 General	14-1
14.2 Power Supplies	14-2
14.2.1 Power Supply Grounding	14-2
14.3 Locations of Amplifiers Serving Coaxial Networks	14-8

14.4 Communications Antenna Locations 14-9
14.5 Supply Equipment in Locations Near Communications Space 14-10

15 General Precautions and Work Rules for Manholes

15.1 General 15-1
15.2 General Precautions and Work Rules 15-1

16 Testing Manhole Atmosphere and Ventilating Manhole

16.1 General Precautions 16-1
 16.1.1 Tents 16-1
 16.1.2 Open Flames and Furnaces 16-2
 16.1.3 Fusion Splicing Fiber Optic Cable in Cable Entrance Facilities
 (CEFs) and Manholes 16-2
 16.1.4 Radon in Manholes 16-2
16.2 Gas Indicators and Monitors 16-3
 16.2.1 Non-Continuous Gas Indicators (Hand-Aspirated) 16-3
 16.2.2 Continuous Gas Monitors 16-4
16.3 Blowers 16-5
 16.3.1 Blower Capacities 16-5
 16.3.2 Blower Maintenance 16-5
16.4 Setups for Testing and Purging Manholes 16-6
 16.4.1 General 16-6
 16.4.2 Conventional Manholes 16-7
 16.4.3 Irregular-Shaped Manholes 16-8
 16.4.4 Offset-Access Manholes 16-9
 16.4.5 Deep-Neck Manholes 16-11
16.5 Purge Times 16-14
 16.5.1 Alignment Charts 16-14
 16.5.2 Determining Purge Times 16-17
16.6 Testing, Purging, and Ventilating Manholes 16-18
 16.6.1 General 16-18
 16.6.2 Initial Test Prior to Entry 16-18
 16.6.3 Tests at Entry 16-19
 16.6.4 Tests and Precautions During Work Operations 16-20
16.7 Testing Cable Entrance Facilities (CEFs) for Combustible Gas 16-23
 16.7.1 General 16-23
 16.7.2 Test Procedures 16-23
16.8 Testing Unattended Buildings for Combustible Gas 16-24
16.9 Water Discharge From Manhole 16-24

17 Bonding Cables in Manholes

17.1 General 17-1
17.2 Location of Bonds 17-1
17.3 Placing Bonds 17-1
17.4 Connection to Ground (Earth) 17-2

18 Identification Markers for Underground Cable

18.1 General 18-1

18.2 Description 18-2
18.3 Cable Tag Location 18-2
18.4 Method of Installing Tags 18-2

19 Sealing Ducts and Ductliners

19.1 General Definitions 19-1
19.2 General Sealing 19-1
19.3 Where Seals Are Required 19-3
19.4 Rubber Duct Plug - Description 19-4
19.5 Installing Rubber Duct Plugs 19-10
19.6 Removing Rubber Duct Plugs 19-12
19.7 Description of Caulking Materials 19-15
19.8 Installing WATERPLUG 19-16
19.9 Installing Plastic Duct Seals 19-17
19.10 Wooden Duct Plugs 19-17
19.11 Plastic Conduit Plugs – Description and Use 19-18
19.12 Ductliner (Innerduct) 19-19
 19.12.1 Microducts and Fabric Sleeves 19-20

20 Buried Plant Construction - General

20.1 Construction of Facilities - General 20-1
20.2 Construction Specifications 20-2
 20.2.1 Random Separation of Communications Cables 20-2
 20.2.2 Random Separation of Communications and Power Cables 20-4
 20.2.3 Planned Separation of Cables 20-5
 20.2.4 Bonding and Grounding 20-6
 20.2.5 Bonding and Grounding of Buried Fiber Optic Cable 20-7
 20.2.6 Depth of Buried Cable 20-7
 20.2.7 Trench Bottom and Backfill 20-8
 20.2.8 Trouble and Maintenance Procedures 20-8
 20.2.9 Joint-Use Buried Networks - Buried Duct Networks (BDNs) 20-9
20.3 Cable Placing 20-10
20.4 Splice Point Excavations 20-10
20.5 Handholes 20-11
 20.5.1 Applications 20-11
 20.5.2 Installation 20-12
20.6 Backfilling and Ground Restoration 20-13
20.7 Permanent Markings 20-14

21 High-Air-Speed, Blown Cable, Installation System

21.1 General 21-1
21.2 Product Description 21-1
 21.2.1 Principle of Operation 21-1
 21.2.2 Equipment Description 21-2
21.3 HASB Method of Cable Placement 21-3
 21.3.1 Preparation 21-3
 21.3.2 HASB Set-Up 21-5
 21.3.3 Cable Installation 21-6

22 Direct-Buried Innerduct Construction Guidelines

22.1 General	22-1
22.2 Applications	22-1
22.3 Innerduct Types	22-2
22.3.1 General Considerations	22-2
22.3.2 Metallic Service Wire	22-3
22.3.3 Distribution	22-3
22.4 Innerduct Installation Methods and Practices	22-3
22.4.1 Planning	22-3
22.4.2 General Considerations	22-3
22.4.3 Trenching	22-5
22.4.4 Microtrenching in Urban Environments	22-5
22.4.5 Plowing	22-8
22.4.6 Directional Drilling	22-8

23 Directional Drilling

23.1 General	23-1
23.2 Description	23-1
23.3 Preliminary Site Investigation	23-4
23.3.1 Existing Below-Ground Utilities	23-4
23.3.2 Surface Investigation	23-4
23.3.3 Subsurface Investigation	23-5
23.4 Safety During HDD Operation	23-5
23.5 Environmental Considerations	23-8
23.6 Regulations and Damage Prevention	23-8
23.6.1 Locating and Marking	23-9
23.7 Product Pipe (Innerduct)	23-11
23.8 Bore Path Layout and Design	23-11
23.8.1 Bore Path Profile/Trajectory (Vertical Plane)	23-12
23.8.2 Bore Path (Horizontal) Planar Trajectory	23-14
23.8.3 Overall Bore Path Layout	23-14
23.9 Implementation	23-15
23.9.1 Tracking and Locating	23-16
23.9.2 Reaming	23-17
23.9.3 Gripping and Pulling	23-18
23.10 Inspection and Site Cleanup	23-19

24 Bonding for Communication Drop Wire and Cable

24.1 General	24-1
24.1.1 Significant Changes in 2011 NEC	24-1
24.1.1.1 New Article 840 “Premises-Powered Broadband Communications Systems”	24-1
24.1.1.2 Grounding Terminology	24-2
24.2 Purpose of Grounding	24-3
24.3 Bonding and Grounding	24-4
24.4 Inspections and Maintenance	24-7

25 Placing Cable Guards at Subsidiary Conduit Locations

26 FTTX Deployments

26.1 General	26-1
26.1.1 Shipment	26-1
26.1.2 Security and Safety Practices	26-1
26.1.3 Fiber Optic Cable Placement	26-2
26.2 Underground Cable Placement	26-2
26.2.1 Pre-Survey	26-3
26.2.2 Tools and Equipment	26-4
26.2.3 Innerduct	26-4
26.2.3.1 Microducts and Fabric Sleeves	26-5
26.2.4 Standard Innerduct Coupling for Pulling Method	26-6
26.3 Direct-Buried Cable	26-10
26.3.1 Depth of Cover	26-11
26.3.2 Pre-Survey	26-11
26.3.3 Trenching Placing Method	26-12
26.3.4 Cable Placing	26-13
26.3.5 Backfilling and Ground Restoration	26-13
26.3.6 Rollers and Guide Tubes	26-14
26.3.7 Fiber Drop Plant - ONUs, Pedestals, and Handholes	26-14
26.4 Aerial Cable Placing Method	26-15
26.4.1 Stationary-Reel Method (Backpull)	26-16
26.4.2 Moving Reel Without Aerial Lift (Drive Off)	26-16
26.4.3 Moving Reel With Aerial Lift (Drive Off)	26-16
26.5 Pole-Mounted Cabinets	26-17
26.5.1 Pre-Planning	26-17
26.5.2 Mounting the Cabinet	26-17
26.6 Ground-Mounted Cabinets	26-17
26.7 Factory Installed Termination System (FITS)	26-18
26.7.1 General Considerations	26-18
26.7.2 Aerial FITS Plant	26-18
26.7.3 Buried FITS	26-19
26.8 Premises-Powered Broadband Communications Systems	26-19

27 Symbols for Grid and Mapping Diagrams

27.1 General	27-1
27.2 Drafting Practices Applicable to Graphic Symbols	27-1
27.3 Aerial Plant	27-2
27.3.1 Poles	27-2
27.3.2 Pole Line Support Elements	27-4
27.3.3 Cable Support Elements Stranded or Solid Messenger Items With Poles Shown	27-5
27.3.4 Anchoring and Guying With Poles Shown	27-5
27.3.5 Cross Connects	27-7
27.4 Underground and Buried	27-8
27.5 Terminals	27-10
27.6 Telecom Metallic Pair Devices	27-11
27.7 Power	27-11

27.8 House CATV Drop Designations With Poles Shown	27-12
27.9 CATV Devices	27-13
27.9.1 Power Devices - Amplifiers	27-13
27.9.2 Power Devices - Splitters	27-14
27.9.3 Power Devices - AC Power Block	27-14
27.9.4 Equalizer	27-15
27.9.5 Subscriber Taps	27-15
27.9.6 Other Powering Devices	27-16
27.9.7 Other Devices	27-16
27.9.8 Carrier Equipment	27-17
27.9.9 Signal Processing Locations (Antenna Site, Head-End, Hub, etc.)	27-18
27.9.10 Coaxial Cables	27-18
27.10 Fiber Optic Plant	27-19

Appendix A: New Ice Loading Map Effects on the National Electrical Safety Code® (NESC)

A.1 General	A-1
A.2 Code Cycles — 2002 to 2011	A-1
A.3 Effect of New Ice Loading Map on NESC Clearances	A-2
A.4 Effect of New Ice Loading Map on NESC Strength and Loading	A-3
A.5 Resolution	A-3
A.6 2012 Code and Possible Future Directions	A-5

Appendix B: NESC 2012 to 2017 Code Cycle

B.1 Code Cycle Schedule — 2012 to 2017	B-1
B.2 Working Groups and Potential Future Issues	B-1

Appendix C: References

C.1 Telcordia Documents	C-1
C.2 Non-Telcordia Documents	C-1
C.2.1 To Obtain Additional Reference Material	C-4
C.3 Telcordia Reference Notes	C-4
C.3.1 Contact Telcordia	C-4
C.3.2 Order Documents Online From the Telcordia Information SuperStore	C-4
C.3.3 Telcordia Web Site for Generic Requirements Information	C-5
