

The Analysis and Use of Software Reliability and Quality Data

Contents

1. Introduction	1-1
2. Executive Summary	2-1
3. Relationship of This Special Report To Other Telcordia Documents	3-1
4. General Needs for Proper Analysis	4-1
5. Caveats on Procedures Discussed	5-1
6. Analysis of Counts of Software Failures	6-1
6.1 Models with Only Time As an Explanatory Variable	6-2
6.1.1 Testing for Trend	6-3
6.1.2 Estimation in the Model with No Trend	6-5
6.1.3 Estimating the Magnitude of a Trend.....	6-5
6.1.4 Confidence Interval for an Estimated Trend	6-7
6.1.5 Predicting Future Failure Counts with a Trend Present	6-8
6.2 Performance Comparison of Software Products.....	6-8
6.3 Introduction to Poisson Regression	6-9
6.4 Poisson Regression with Only One Explanatory Variable	6-9
6.5 Poisson Regression with Multiple Explanatory Variables	6-14
6.5.1 Variable Selection: Judging the Effect of a Variable	6-16
6.5.2 Prediction	6-20
7. Analysis of Time to Repair Data	7-1
7.1 Estimation With Censored Data	7-2
7.1.1 Parametric Methods	7-3
7.1.2 Nonparametric Methods.....	7-5
7.2 Proportional Hazards Model	7-6
7.3 Goodness of Fit Procedures.....	7-15
7.4 Tests for Trends in Repair Times	7-18
7.4.1 Testing Differences between Releases	7-18
7.4.2 Tests for Repair Time Changes As the Release Age Increases	7-21
7.4.3 Tests for Abrupt Repair Time Change As the Release Age	
Increases	7-24
7.4.4 Other Tests for Trend.....	7-28
7.5 Conclusion.....	7-28
8. Analysis of Other Software Measurements	8-1
8.1 Software Changes and Patches.....	8-1
8.2 Problem Reports	8-2
References	References-1

List of Figures

Figure 8-1. Graph for Maximum Likelihood Estimation of Trend.....	8-5
