

GENERIC REQUIREMENTS FOR SONET
COMPATIBLE DIGITAL RADIO

CONTENTS

1. Introduction	3
1.1 Purpose of Document	3
2. SONET Background	3
2.1 The Rationale for SONET	3
2.2 Basic Concept of SONET	5
2.3 SONET Signals	5
3. Operations Support for SONET	6
3.1 Performance Monitoring	6
3.2 Performance Parameters	6
3.3 Alarms	6
3.4 Alarm Indication Signal (AIS)	7
3.5 Orderwire	7
4. Impacts of SONET on Digital Radio Systems	7
4.1 Baseband Interface	7
4.2 Higher Transmission Rate	8
4.3 Standardized Overhead Bits For Maintenance And Operation	8
5. Newly Proposed Generic Requirements for Next Generation Digital Radio	8
5.1 Baseband Interface	8
5.2 Timing and Synchronization Requirement	9
5.3 Interference Control	10
5.4 Dispersive Fade Margin And Fading Signature	10
5.5 Adaptive Equalizer And Hysteresis	11
5.6 Errorless Frequency Diversity Switch	11
5.7 Diversity Combiner	12
5.8 Variable Transmitter Power	12
5.9 Test Jacks of Propagation Conditions	12
5.10 Required Options on Performance Monitoring and Operation Support	13
6. Glossary	16
6.1 Acronyms	16
6.2 Definitions	17
7. References	18

LIST OF FIGURES

Figure 1. STS-1 Frame	20
Figure 2. Overhead Byte Locations in an STS-1 Frame	21
Figure 3. STS-1 Synchronous Payload Envelope with STS-1 Path Overhead (POH) and STS-1 Payload Capacity Illustrated	22
Figure 4. Provisional Clock Short Term Stability Requirements	23

LIST OF TABLES

Table 1. Impact of SONET on Digital Radio Bit Rate	19
