1.	Introduction	1-1
1.1	Purpose and Scope	1-1
1.2	Organization	1-1
1.3	Schematic Identifiers	1-2
1.4	Conventions for Generic Criteria	1-3
1.5	Reasons for Reissue	1-3
2.	Definitions	2-1
3.	Objectives	3-1
4.	General Principles and Requirements.	4-1
4.1	Reasons for Grounding	4-1
4.1.1	Personnel Safety	4-1
4.1.2	Equipment and Distribution Circuit Protection.	4-1
4.1.3	Equipment Operation	4-1
4.1.4	Conducted Noise Reduction	4-1
4.1.5	Reference Buses	4-2
4.1.6	Electrostatic Discharges (ESD)	4-2
4.1.7	Reliability	4-2
4.2	Isolated Ground Plane Principles.	4-2
4.2.1	The Simplified Isolated Ground Plane	4-2
4.2.2	Noise Current Flow In the Isolated Ground Plane	4-2
4.3	Power Supply Grounding Methods	4-3
4.3.1	Multigrounded Power Sources	4-4
4.3.2	DC Power Supplies	4-4
4.3.2.1	Grounding Location	4-4
4.3.2.2	Return Conductors	4-4
4.3.2.3	Isolated Ground Plane Grounding Conductors	4-5
4.3.2.4	Power Distribution Cabinets (PDCs)	4-5
4.3.3	AC Power Supplies	4-5
4.3.3.1	Safety Requirements	4-5
4.3.3.2	Raceways	4-5
4.3.3.3	Use of AC Equipment Grounding (ACEG) Conducto	4-5
4.3.3.4	ACEG Requirements	4-6
4.3.3.5	Single-Point Grounding of AC Power Supplies	4-6
4.3.3.6	Grounding Internal AC Power Supplies	4-6
4.3.3.6.1	Grounding Internal AC Power Supplies That Power Remote Loads	4-6
4.3.3.7	General-Purpose Receptacles	4-7
4.3.3.7.1	Receptacles Powered From Internal AC Power Supplies.	4-7
4.3.3.8	Special-Purpose Receptacles	4-7
4.4	General Grounding Conductor and Connection Requirements	4-7

4.4.1	For DC Conductors	4-7
4.4.2	For AC Equipment Ground (ACEG) Conductors	4-7
4.4.3	Connections	4-8
4.5	Induction Effects	4-8
4.5.1	Lightning and Fault Current Carrying Conductors	4-9
4.5.2	Nearby Integrated Ground Plane Members	4-9
5.	Specific Requirements	5-1
5.1	Isolated Ground Plane Frames	5-1
5.1.1	One Conductive Unit	5-1
5.1.2	Insulation Resistance	5-1
5.1.2.1	Anchor Bolts	5-1
5.1.2.2	Bottom of Frames.	5-1
5.1.2.3	Superstructure Supports.	5-2
5.1.2.4	Lighting Fixtures, etc.	5-2
5.1.3	Frame-to-Frame Connections	5-2
5.1.4	Grounding Among Groups of Frames	5-2
5.1.4.1	Serial and Radial Connections Within the Isolated Ground Plane	5-3
5.1.4.2	Frame Interconnections Within the Isolated Ground Plane	5-3
5.1.5	Limits on the Number of Floors an Isolated Ground Plane Can Occupy	5-3
5.1.6	Peripheral Equipment Frame Grounding	5-6
5.2	Establishing a Separate Ground Window	5-6
5.2.1	Dimensions.	5-7
5.2.2	Location	5-7
5.2.3	Ground Window Connections	5-7
5.3	Grounding Conductor Requirements.	5-10
5.3.1	Clearing a Fault to the Frame of the Power Plant	5-11
5.3.1.1	Conductor B as Part of the Sole Fault-Clearing Path	5-11
5.3.1.2	Conductor A as Part of the Sole Fault-Clearing Path	5-13
5.3.1.3	Conductor A as a Redundant Fault-Clearing Conductor	5-13
5.3.1.4	Conductor A as a Coupled Bonding Conductor	5-13
5.3.1.5	Summary.	5-14
5.3.2	Type.	5-15
5.3.3	Connections	5-15
5.3.4	Single Grounding Conductors	5-16
5.3.4.1	Girdling	5-16
5.3.4.2	Bending Radius	5-17
5.4	External Principal Power Plant Grounding Requirements.	5-20
5.4.1	The Return Bus	5-20
5.4.2	Grounding the Return Bus	5-20
5.4.3	Grounding the Plant's Frame	5-20

5.4.4	Location of the Power Plant	5-21
5.4.5	Power Feeders	5-21
5.5	Integrated Ground Plane Loads	5-21
5.5.1	Loads Fed from the Principal DC Source	5-21
5.5.2	Loads Fed from Internal Power Sources	5-22
5.6	Frame Ground Reference Buses	5-22
5.6.1	Grounding Internal DC and AC Power Supplies Within the Isolated Ground Plane.	5-23
5.7	Grounding the External AC and DC Power Supplies Feeding Isolated Ground Plane Loads (other than the principal power source)	5-24
5.7.1	DC Power Supplies	5-24
5.7.2	AC Power Supplies	5-24
5.7.2.1	Treatment of the AC Conductors	5-24
5.8	Specific Examples of AC and DC Grounding Principles for Isolated Ground Planes	5-24
5.9	Grounding the Common Power Plant and Powering the Integrated and Isolated Ground Plane Systems	5-25
5.9.1	Basic Requirements Applicable to All Systems	5-25
5.9.2	For Digital Isolated Ground Plane Switching Systems	5-25
5.9.3	For Integrated Ground Planes	5-26
5.9.4	For Analog Isolated Ground Plane Switching Systems	5-26
5.10	Ground Window Configurations	5-26
5.10.1	Separate Ground Window	5-27
5.10.2	Using the Return Bus as the Ground Window	5-27
5.10.2.1	Requirements for Plants with an Insulated Return Bus (see Figure 5-7)	5-27
5.10.2.2	Requirements for Plants with a Noninsulated Return Bus (See Figure 5-8)	5-28
5.11	Methodology	5-28
6.	Performance Verification and Test Procedures	6-1
6.1	Visual Tests	6-1
6.1.1	Spotting Isolated Ground Plane Violations	6-1
6.1.2	Grounding of Power Supplies	6-1
6.2	External Power Supplies	6-1
6.3	Internal Supplies	6-1
6.3.1	Ground Window Conductors	6-2
6.3.2	Listing Label and Wiring	6-2
6.3.3	Power Feeds	6-2
6.3.4	Continuity Tests	6-2
6.4	Insulation Tests	6-2
6.4.1	Low-Voltage Resistance Test	6-2
6.4.2	High-Voltage Resistance Test	6-2
6.5	Short-Circuit Tests	6-3
6.5.1	DC Circuits	6-3
6.5.2	AC Circuits	6-3
6.6	Isolated Ground Plane Noise Current Tests	6-4

6.6.1	Abnormal Current Flow In Grounding Wires and Frames . . .	6-4
6.6.2	Correctly Wired Circuit Arrangements	6-4
6.6.3	Correcting Incorrectly Wired Circuit Arrangements	6-4
6.6.3.1	Multigrounded AC and DC Power Sources	6-4
6.6.3.2	Overvoltage Protectors	6-5
6.6.3.3	Improper Load Connections	6-5
	Appendix A: Overview of Central Office Bonding and Grounding Methods . .	A-1
