## 1 Introduction

1.1 Purpose and Scope                                                   | 1-1  |
1.2 Items Not Covered                                                    | 1-1  |
1.3 Requirements Terminology                                             | 1-2  |
1.4 Requirement Labeling Conventions                                    | 1-3  |
1.4.1 Numbering of Requirement and Related Objects                      | 1-3  |
1.4.2 Requirement, Conditional Requirement, and Objective Identification| 1-3  |
1.5 Organization                                                         | 1-3  |
1.6 Reasons for Reissue                                                  | 1-5  |
1.7 Application of This Document                                         | 1-6  |
1.8 Number of Samples to be Tested                                      | 1-7  |
1.9 Relation to Other Telcordia Documents                                | 1-7  |

## 2 System-Level Electrostatic Discharge (ESD) and Electrical Fast Transient (EFT)

2.1 System-Level Electrostatic Discharge (ESD)                           | 2-1  |
2.1.1 Overview                                                          | 2-1  |
2.1.2 ESD Immunity Criteria                                             | 2-1  |
2.1.2.1 Immunity Criteria — Normal Operation                            | 2-2  |
2.1.2.2 Immunity Criteria — Installation and Repair                      | 2-2  |
2.1.2.3 ESD Warning Label Requirements                                  | 2-2  |
2.1.2.4 Equipment-Specific Requirements                                 | 2-3  |
2.1.3 Service-Affecting Responses and Manual Interventions             | 2-3  |
2.1.4 ESD Test Methods and Procedures                                   | 2-3  |
2.1.4.1 Test Methods — Normal Operation                                | 2-4  |
2.1.4.2 Test Methods — Installation and Repair                          | 2-4  |
2.1.4.3 Selection of Test Points                                        | 2-4  |
2.1.4.4 EUT Operating Conditions                                       | 2-5  |
2.1.4.5 ESD Test Site                                                   | 2-6  |
2.2 Electrical Fast Transient (EFT)                                      | 2-6  |
2.2.1 EFT Test Methods and Procedures                                   | 2-7  |

## 3 Electromagnetic Interference

3.1 General                                                              | 3-1  |
3.1.1 Overview ................................................. 3-1
3.1.2 Intent of EMI Criteria .................................. 3-1
3.1.3 FCC Part 15 Criteria .................................... 3-2
3.1.4 FCC Part 68 and ACTA Technical Criteria ............ 3-3
3.2 Emission Criteria ......................................... 3-4
3.2.1 Radiated Emission Criteria ............................ 3-4
    3.2.1.1 Electric Fields Radiated Emission Criteria ....... 3-4
    3.2.1.2 Magnetic Fields Radiated Emission Requirement ... 3-9
3.2.2 Conducted Emission Criteria for Power Ports ........ 3-9
    3.2.2.1 Conducted Emission Requirements for AC Power Ports — Voltage . 3-9
    3.2.2.2 Conducted Emission Requirements for AC and DC Power Ports— Current . 3-10
3.2.3 Conducted Emission Criteria for Telecommunications Ports .... 3-12
    3.2.3.1 Conducted Emission Requirements for Signal Leads — Current . 3-12
    3.2.3.2 Conducted Emission Requirements for Analog Voiceband Leads . 3-12
    3.2.3.3 Conducted Emission Objectives for Broadband Leads ....... 3-13
3.3 Immunity Criteria ......................................... 3-17
3.3.1 Radiated Immunity Criteria ............................ 3-18
    3.3.1.1 Electric Fields Radiated Immunity Criteria with Doors and Covers Closed .... 3-18
    3.3.1.2 Electric Fields Radiated Immunity Criteria with Doors and Covers Open ........ 3-18
3.3.2 Conducted Immunity Criteria for AC and DC Power Ports ........ 3-20
3.3.3 Conducted Immunity Criteria for Telecommunications Ports .... 3-21
    3.3.3.1 Conducted Immunity Requirement for Signal Leads .............. 3-21
    3.3.3.2 Conducted Immunity Requirement for Broadband and Voiceband Leads .......... 3-21
3.4 Measurement Procedures Associated with Emissions ........ 3-22
3.4.1 Scope .................................................. 3-22
3.4.2 Related Standards ...................................... 3-22
3.4.3 Measuring Instrumentation ............................. 3-22
    3.4.3.1 General ........................................... 3-22
    3.4.3.2 Analog Voiceband Emissions Measurement Instrumentation .................. 3-23
    3.4.3.3 Broadband Emissions Measurement Instrumentation ......................... 3-24
    3.4.3.4 Measuring Instrument Calibration .......................... 3-24
    3.4.3.5 Detector Function Selection and Bandwidth ...................... 3-24
    3.4.3.6 Antennas ........................................... 3-25
3.4.4 General Test Conditions ............................... 3-29
    3.4.4.1 Emission Measurement Uncertainty ...................... 3-29
    3.4.4.2 Testing at an Open-Area Test Site (OATS) ............... 3-29
    3.4.4.3 Testing at User's Installation (On-Premises Testing) .......... 3-29
    3.4.4.4 Testing in a Shielded Enclosure ........................ 3-31
    3.4.4.5 Subsystem Emission Limits Allocation .................... 3-32
    3.4.4.6 Units of Measurement ................................ 3-32
    3.4.4.7 Data Reporting Format .............................. 3-32
    3.4.4.8 Test Conditions for EUT ................................ 3-33
4 Lightning and AC Power Fault

4.1 Overview ................................................. 4-1
4.2 Electrical Protection on Paired-Conductor Systems ..................... 4-1
  4.2.1 Voltage-Limiting Protectors ................................ 4-1
  4.2.2 Current-Limiting Protectors ................................ 4-1
  4.2.3 Fuse Links .......................................... 4-2
4.3 Lightning on Paired-Conductor Cables ................................ 4-2
  4.3.1 Longitudinal Surges ..................................... 4-2
  4.3.2 Metallic Surges ........................................ 4-3
4.4 AC Power Fault on Paired-Conductor Cables ............................. 4-3
  4.4.1 Power Contact to Telecommunications Outside Plant ............... 4-3
  4.4.2 Fault Induction from Electric Power Lines ....................... 4-3
4.5 Lightning and AC Power Fault Criteria ................................................. 4-4
  4.5.1 Characterization of Test Generators .............................................. 4-4
4.6 Criteria for Equipment Interfacing with Telecommunications Ports .......... 4-7
  4.6.1 Testing of Telecommunications Ports ............................................. 4-8
  4.6.2 Voltage-Limiting Protection for Central Office Switching Systems .......... 4-8
  4.6.3 Number of Samples to be Tested ................................................. 4-9
  4.6.4 Fire Hazard Indicator for Second-Level Criteria ............................... 4-9
  4.6.5 Short-Circuit Tests (Telecommunications Port) ................................ 4-10
  4.6.6 Lightning Surge and AC Power Fault Test Connections (Telecommunications Port) ...................................................... 4-11
  4.6.7 First-Level Lightning Surge Tests (Telecommunications Port) .............. 4-12
    4.6.7.1 Protection Coordination ...................................................... 4-15
  4.6.8 Second-Level Lightning Surge Tests (Telecommunications Port) ............ 4-18
  4.6.9 Intra-Building Lightning Surge Tests (Telecommunications Port) ........... 4-19
  4.6.10 First-Level AC Power Fault Tests (Telecommunications Port) ............... 4-21
  4.6.11 Current-Limiting Protector Tests for Non-Customer-Premises Equipment (Telecommunications Port) .................................. 4-24
    4.6.11.1 Test Procedure .............................................................. 4-24
  4.6.12 Second-Level AC Power Fault Tests for Non-Customer-Premises Equipment (Telecommunications Port) .................................. 4-29
  4.6.13 Second-Level AC Power Fault Tests for Series-Type Non-Customer-Premises Equipment (Telecommunications Port) ......................... 4-30
  4.6.14 Fusing Coordination Tests for Network Equipment to be Located on Customer Premises (Telecommunications Port) .............................. 4-31
    4.6.14.1 Test Procedure .............................................................. 4-32
  4.6.15 Second-Level AC Power Fault Tests for Network Equipment to be Located on Customer Premises (Telecommunications Port) ......................... 4-33
    4.6.15.1 Test Procedure .............................................................. 4-36
  4.6.16 Second-Level AC Power Fault Tests for Series-Type Network Equipment to be Located on Customer Premises (Telecommunications Port) ......................... 4-36
  4.6.17 Second-Level Intra-Building AC Power Fault Tests for Network Equipment to be Located on Customer Premises (Telecommunications Port) ......................... 4-37
4.7 Lightning Criteria for Equipment Interfacing with AC Power Port .......... 4-38
4.8 Criteria for Equipment Interfacing with Coaxial Cable Ports .................... 4-39
  4.8.1 Number of Samples to be Tested ................................................. 4-41
  4.8.2 Short-Circuit Tests .............................................................. 4-41
  4.8.3 Broadband Communications Equipment Intended for Use Without External Protectors .......................................................... 4-41
    4.8.3.1 First-Level Lightning and Power Fault Tests ............................... 4-42
    4.8.3.2 Second-Level Lightning and Power Fault Tests ............................ 4-43
  4.8.4 Broadband Communications Equipment Intended for Use with an External Protector .......................................................... 4-43
    4.8.4.1 First-Level Lightning and Power Fault Tests ............................... 4-45
    4.8.4.2 Second-Level Lightning and Power Fault Tests ............................ 4-46
  4.8.5 Additional Criteria for Equipment Intended for the Outside Plant .......... 4-48
5 Steady-State Power Induction

5.1 Overview ................................................. 5-1
5.2 Longitudinal Induction Criteria for Long (> 20 kft) Loops .......... 5-2
  5.2.1 Longitudinal Induction Test Circuit for Long (> 20 kft) Loops .... 5-2
  5.2.2 Calibration Procedure .................................. 5-5
  5.2.3 Test Procedures ....................................... 5-5
    5.2.3.1 Test Procedure for a CO Switching System Line Circuit .... 5-6
  5.2.4 Performance Criteria .................................. 5-7
  5.2.5 Noise Performance for Voiceband Circuits ...................... 5-7
5.3 Longitudinal Induction Criteria for Short (< 20 kft) Loops ........ 5-8
  5.3.1 Longitudinal Induction Test Circuit for Short (< 20 kft) Loops ... 5-9
  5.3.2 Calibration Procedure .................................. 5-11
  5.3.3 Test Procedures ....................................... 5-11
    5.3.3.1 Test Procedure for ISDN Technology .................... 5-12
    5.3.3.2 Test Procedure for DSL Technologies ................... 5-12
    5.3.3.3 Test Procedure for RT Line Circuits of a DLC System .... 5-13
  5.3.4 Performance Criteria .................................. 5-13
  5.3.5 Noise Performance for Voiceband Circuits ...................... 5-14
5.4 Longitudinal Induction Criteria for Analog Trunks ................. 5-17
  5.4.1 Longitudinal Induction Test Circuit for Trunks ................. 5-17
  5.4.2 Calibration Procedure .................................. 5-20
  5.4.3 Test Procedure ....................................... 5-20
    5.4.3.1 Test Procedure for Analog Trunk Circuits ............... 5-20
    5.4.3.2 Test Procedure for DLC System Interfaces between RT and COT ... 5-22
  5.4.4 Performance Criteria .................................. 5-22
  5.4.5 Noise Performance for Voiceband Circuits ...................... 5-23
5.5 Longitudinal Induction Criteria for Coaxial Cables ............... 5-24
  5.5.1 Longitudinal Induction Test Circuit for Coaxial Cables ......... 5-24
  5.5.2 Test Procedure ....................................... 5-25
  5.5.3 Performance Criteria .................................. 5-26

6 DC Potential Difference

7 Electrical Safety Criteria

7.1 Overview ................................................. 7-1
7.2 Listing Requirements ..................................... 7-1
7.3 Classification of Voltages ................................ 7-2
  7.3.1 Continuous Voltage and Current Limits ..................... 7-2
    7.3.1.1 Class A1 Voltage Limits ............................. 7-4
    7.3.1.2 Class A2 Voltage Limits ............................. 7-8
    7.3.1.3 Class A3 Voltage Limits ............................. 7-11
    7.3.1.4 Class AB Voltage Limits ............................. 7-14
    7.3.1.5 Class B Voltage Limits ............................. 7-14
    7.3.1.6 Class C Voltage Limits ............................. 7-14
  7.4 Continuous Source Requirements ................................ 7-14
    7.4.1 Class A1 Voltage Accessibility Requirements .............. 7-18
7.4.2 Class A2 Voltage Accessibility Requirements ... 7-18
7.4.3 Class A3 Voltage Accessibility Requirements ... 7-18
7.4.4 Class AB Voltage Accessibility Requirements ... 7-18
7.4.5 Class B Voltage Accessibility Requirements ... 7-19
7.4.6 Class C Voltage Accessibility Requirements ... 7-19

7.5 Duration-Limited Source Requirements ... 7-19
7.5.1 Interrupted/Tripped Sources ... 7-19
7.5.2 Ring-Trip Test Procedure ... 7-21
7.5.3 Transient Sources ... 7-21

7.6 Power Limitation Requirement ... 7-23
7.7 Leakage Currents from Exposed Surfaces ... 7-23
7.7.1 General Considerations ... 7-23
7.7.2 Leakage Current Requirements ... 7-23
7.7.2.1 Leakage Current Requirements for Large Area Contact ... 7-24
7.7.2.2 Leakage Current Requirements for Small Area Contact ... 7-24
7.7.2.3 Leakage Current Between Surfaces of Equipment ... 7-24

8 Corrosion
8.1 Polarity of DC Voltages Applied to Outside Plant Cabling ... 8-1
8.2 Magnitude of DC Voltages Applied to Outside Plant Cabling ... 8-1

9 Bonding and Grounding
9.1 Scope ... 9-1
9.2 General Requirements ... 9-1
9.3 Equipment Grounding Systems ... 9-2
9.3.1 The Common Bonding Network (CBN) ... 9-3
9.3.2 Isolated Bonding Network (IBN) ... 9-3
9.4 AC Equipment Grounding ... 9-4
9.5 Communication Equipment Grounding ... 9-4
9.5.1 Network Telecommunication Facilities ... 9-5
9.5.2 Locations Where the NEC Applies ... 9-5
9.5.3 Outside Plant ... 9-6
9.6 Unit Bonding and Grounding ... 9-6
9.7 Provisions for Unit Assembly Bonding and Grounding ... 9-7
9.7.1 Connectors and Connection Methods for Equipment Assemblies ... 9-8
9.7.2 Bonding of Circuit Packs ... 9-8
9.8 DC Power System Grounding ... 9-9
9.8.1 Centralized Power Sources ... 9-9
9.8.2 Embedded Power Sources ... 9-9
9.8.3 Bonding of DC-Return Input Terminals ... 9-10
9.9 Bonding and Grounding Conductor and Connection Requirements ... 9-11
9.9.1 Bonding and Grounding Conductors ... 9-11
9.9.2 Connections ... 9-11
9.9.3 Connectors ... 9-12
9.10 Short-Circuit Tests ... 9-13
9.10.1 DC Power Sources ... 9-13
9.10.2 AC Power Sources .................................................. 9-14
9.11 Other Grounding Considerations .................................. 9-16
9.12 Compatibility of Former IBN Equipment with CBN Currents .................................................. 9-16
  9.12.1 Test Conditions for EUT ......................................... 9-16
    9.12.1.1 Conditioning of the EUT .................................. 9-16
    9.12.1.2 Interfacing Units and Simulators ....................... 9-16
    9.12.1.3 DC Power Leads ........................................... 9-17
    9.12.1.4 Bonding Conductors ...................................... 9-17
    9.12.1.5 Shelf-Mounted EUT ....................................... 9-18
    9.12.1.6 The Reference Plane ..................................... 9-18
    9.12.1.7 Test Environment .......................................... 9-18
  9.12.2 Identification of Test Points ................................. 9-18
  9.12.3 DC Fault Test .................................................. 9-19
  9.12.4 AC Fault Test .................................................. 9-20
  9.12.5 Frame EFT Test ................................................ 9-21
    9.12.5.1 Laboratory Arrangement of the EUT .................... 9-22
    9.12.5.2 In-Situ Arrangement of the EUT ...................... 9-23
  9.12.6 Frame Surge Test .............................................. 9-24
    9.12.6.1 Laboratory Arrangement of the EUT .................... 9-24
    9.12.6.2 In-Situ Arrangement of the EUT ...................... 9-25
  9.12.7 Service-Affecting Responses and Manual Interventions .................................................. 9-26

Appendix A: Definition of Double-Exponential Impulse Waveform

Appendix B: Application Guidelines
  B.1 Application Guidelines for Equipment Ports .................... B-1
