# Generic Criteria for ATM Layer Protection Switching Mechanism

## Contents

Preface .....	Preface-1
1. Introduction.....	1-1
1.1 Purpose and Scope .....	1-2
1.2 Organization of this Document .....	1-2
1.3 Requirements Terminology.....	1-2
1.4 Requirement Labeling Conventions.....	1-3
1.4.1 Numbering of Requirement and Related Objects .....	1-3
1.4.2 Requirement, Conditional Requirement, and Objective Object Identification .....	1-4
1.5 Update History .....	1-4
2. Overview of Generic Dedicated ATM Protection Switching Principles .....	2-1
2.1 Overview of ATM Protection Switching Types .....	2-2
2.2 The ATM Virtual Path Group (VPG) .....	2-4
2.3 ATM Protection Switching Mechanisms .....	2-5
2.4 Protection Switch Detection and Trigger Mechanism .....	2-5
2.5 Point-to-Point PS Protection Mechanisms .....	2-6
2.5.1 PTP Systems with 1+1 Protection Mode .....	2-6
2.5.2 PTP Systems with 1:1 Protection Mode .....	2-8
2.6 ATM Protection Domain Overview.....	2-10
2.6.1 Relationships Between Protection Domains .....	2-11
2.6.1.1 Relationships Between Protection Domains of Different Connections .....	2-11
2.6.1.2 Relationships Between Protection Domains of the Same Connection.....	2-12
2.6.1.2.1 Embedded Protection Domains .....	2-12
2.6.1.2.2 Cascaded Protection Domains .....	2-13
2.6.1.2.3 Overlapped Protection Domains.....	2-15
2.7 Overview of Escalation Strategies .....	2-15
2.7.1 ATM PS Examples with No Escalation .....	2-16
2.7.2 ATM PS Examples with Escalation.....	2-17
2.7.3 Possible Interlayer Escalation Mechanisms.....	2-17
2.8 Principles of Operations of the ATM Layer Protection Switching Mechanism .....	2-18
2.8.1 Protocol Example for 1+1 Bidirectional Protection Architecture in Non- Revertive Mode.....	2-20

---

2.8.2	Protocol Example for 1:1 Bidirectional Protection Architecture in Revertive Mode.....	2-23
3.	Equipment Criteria.....	3-1
3.1	Core ATM PS Requirements .....	3-1
3.1.1	ATM Protection Switching Detection Mechanism.....	3-5
3.1.2	Protection Switching Triggers .....	3-6
3.1.3	Protection Switching Coordination Protocol for 1+1 Bidirectional, 1:1 Unidirectional and 1:1 Bidirectional Protection .....	3-8
3.1.3.1	Protection Switching Commands .....	3-10
3.1.3.2	Coordination Protocols .....	3-13
3.1.3.3	State Transition Rules for ATM Point-to-Point PS .....	3-14
3.1.3.4	Bridge and Switch Functions.....	3-15
3.2	Requirements for ATM VPG PS.....	3-16
3.3	Requirements for ATM VP PS .....	3-17
3.4	Requirements Specific to 1+1 Protection.....	3-18
3.4.1	Requirements Specific to 1+1 Unidirectional Protection .....	3-18
3.4.2	Requirements Specific to 1+1 Bidirectional Protection.....	3-18
3.5	Requirements Specific to 1:1 Protection.....	3-19
3.5.1	Extra Traffic .....	3-19
3.5.2	Requirements Specific to 1:1 Unidirectional Protection.....	3-20
3.5.3	Requirements Specific to 1:1 Bidirectional Protection.....	3-20
3.6	Requirements Specific to 1:n Protection.....	3-20
3.7	Requirements Specific to m:n Protection.....	3-20
3.8	Requirements Specific to Escalation.....	3-20
3.8.1	Interlayer Escalation Strategy .....	3-20
3.8.2	Intralayer Escalation Strategy .....	3-21
3.9	Requirements Specific to ATM Shared Protection Ring Mechanism .....	3-21
3.10	Requirements Specific to ATM Ring Interconnection.....	3-22
4.	Operations and Maintenance.....	4-1
4.1	Configuration Management .....	4-1
4.2	Fault Management.....	4-3
4.3	Performance Management .....	4-7
	References .....	References-1
	Acronyms.....	Acronyms-1
	Requirement-Object List .....	ROL-1
	Requirement-Object Index .....	ROI-1

---

## List of Figures

Figure 2-1.	Ring Configuration of Dedicated Point-to-Point ATM Circuits .....	2-2
Figure 2-2.	Bandwidth and Route Allocation for Protection Entities .....	2-3
Figure 2-3.	ATM Virtual Path Groups .....	2-4
Figure 2-4.	ATM Point-to-Point Protection Switching Mechanism .....	2-8
Figure 2-5.	Traffic Interruption During 1:1 Protection Switching .....	2-10
Figure 2-6.	Illustration of ATM Links, Connections and Segments .....	2-11
Figure 2-7.	Relationships Between PDs for a Single ATM Connection.....	2-12
Figure 2-8.	SONET-ATM Escalation Scenario .....	2-16
Figure 2-9.	Principle of 1+1/1:1 Linear Protection Switching Algorithm .....	2-19
Figure 2-10.	1+1 Bidirectional Linear Protection Switching Architecture: Normal and Unidirectional Signal Fail State.....	2-21
Figure 2-11.	1:1 Bidirectional Linear Protection Switching Architecture: Normal and Unidirectional Signal Fail State.....	2-25
Figure 3-1.	Protection Domain Aligned with OAM Connections.....	3-2
Figure 3-2.	Dual Protection of VPC by VPG and VP Protection.....	3-3
Figure 3-3.	Spanning of VP and VPG Protection Domains .....	3-3
Figure 3-4.	Generic OAM Cell Format .....	3-5
Figure 4-1.	Loopback Locations with ATM VP Protection .....	4-4

## List of Tables

Table 2-1.	Protocol Example for 1+1 Bidirectional Architecture in Non-Revertive Operating Mode .....	2-23
Table 2-2.	Protocol Example for 1:1 Bidirectional Architecture in Revertive Operating Mode .....	2-26
Table 3-1.	Generic OAM Cell/ Function Type Identifiers.....	3-5
Table 3-2.	OAM Cell Format for ATM PS Coordination.....	3-7
Table 3-3.	Bridge Request Definition .....	3-9
Table 3-4.	Conceptual Representation of VPG Table.....	3-17
Table 4-1.	Impact of 1+1 VP Protection Switching on OAM Cell Loopback Test...	4-5
Table 4-2.	Impact of 1:1 VP Protection Switching on OAM Cell Loopback Test....	4-6
