Generic Requirements for the Physical Design and Manufacture of Telecommunications Products and Equipment

Contents

Preface

1. Introduction
   1.1 Reason for Reissue
   1.2 Organization
   1.3 Requirements Terminology
   1.4 Requirement Labeling Conventions
      1.4.1 Numbering of Requirement and Related Objects
      1.4.2 Requirement, Conditional Requirement, and Objective Object Identification
   1.5 General Criteria

2. Requirements for All Products
   2.1 General
   2.2 Electrical and Mechanical Integrity
   2.3 Administration of Requirements

3. Materials and Finishes Requirements
   3.1 General
   3.2 Materials
      3.2.1 Fire Resistance Requirements
      3.2.2 Fire Risk Analysis
      3.2.3 Fluxes
      3.2.4 Silver
      3.2.5 Silicones
   3.3 Finishes

4. Separable Connector Requirements
   4.1 General
      4.1.1 Design Considerations
      4.1.2 Noble Metallizations
      4.1.3 Base Metallizations
      4.1.4 Lubrication
         4.1.4.1 Lubrication of Noble Metallizations
         4.1.4.2 Lubrication of Base Metallizations
      4.1.5 Qualification Testing
   4.2 Two-Part and PWB Edge Card Connectors
      4.2.1 Design
      4.2.2 Polarization
      4.2.3 Insertion and Removal Forces

7. PWB Assembly Requirements

7.1 General

7.1.1 Materials

7.1.1.1 Conformal Coatings

7.1.1.2 Fluxes

7.1.2 Assembly Design

7.1.2.1 General

7.1.2.2 Components

7.1.2.3 Layout - General

7.1.2.4 Layout - Thermal Considerations

7.1.2.5 Layout - Clearances

7.1.2.6 Layout - Lead Forms

7.1.2.7 Separable Connections

7.1.2.8 Conformal Coatings

7.1.3 Manufacturing

7.1.3.1 General

7.1.3.2 Clearances

7.1.3.3 Solderability

7.1.3.4 Soldering

7.1.3.5 Warpage

7.1.3.6 Solder Masks

7.1.3.7 Conformal Coatings

7.1.3.8 Insulation Resistance Testing

7.1.3.9 SEC Testing

7.1.3.10 Lubrication

7.1.3.11 Mechanical Damage and Defects

7.1.3.12 Repair of PWB Assemblies - General

7.1.3.13 Repair of PWB Assemblies - Component Removal and Replacement

7.1.3.14 Repair of PWB Assemblies - PWB Repairs

7.1.3.15 Modifications to PWB Assemblies - General

7.1.3.16 Modifications to PWB Assemblies - Wiring Design

7.1.3.17 Modifications to PWB Assemblies - Wire Routing

7.1.3.18 Modifications to PWB Assemblies - Wire Preparation

7.1.3.19 Modifications to PWB Assemblies - Soldering of Modification Wires

7.1.3.20 Modifications to PWB Assemblies - Securing of Modification Wires

7.1.3.21 Modifications to PWB Assemblies - PWB Modifications

7.1.3.22 Modifications to PWB Assemblies - Components

7.2 PWB Assemblies — Through-hole Mounted Components

7.2.1 Assembly Design

7.2.2 Manufacturing

7.2.2.1 Soldering - Plated-Through Hole Solder Joints

7.2.2.2 Soldering - Non-Plated-Through Hole Solder Joints
7.3 PWB Assemblies - Surface Mounted Components ........................................ 7–28
  7.3.1 Materials .............................................................................................. 7–28
    7.3.1.1 Solder Joint Metallurgy ................................................................. 7–28
    7.3.1.2 Solders, Solder Creams and Fluxes - Composition.................. 7–28
    7.3.1.3 Solder Creams - Incoming Material Controls ......................... 7–29
    7.3.1.4 Solder Creams - In-Process Controls ........................................... 7–29
    7.3.1.5 Solder Masks .................................................................................. 7–30
    7.3.1.6 Adhesives ........................................................................................ 7–31
  7.3.2 Assembly Design .................................................................................. 7–32
    7.3.2.1 General .......................................................................................... 7–32
    7.3.2.2 Components .................................................................................. 7–32
    7.3.2.3 Thermal Considerations ................................................................ 7–32
    7.3.2.4 Lead Forms .................................................................................. 7–33
    7.3.2.5 Termination Metallizations ............................................................ 7–33
  7.3.3 Reliability .............................................................................................. 7–33
  7.3.4 Manufacturing ...................................................................................... 7–34
    7.3.4.1 Soldering - General ................................................................. 7–34
    7.3.4.2 Soldering - Reflow Processes ...................................................... 7–34
    7.3.4.3 Soldering - Wavesoldering Processes ......................................... 7–35
    7.3.4.4 Warpage ....................................................................................... 7–35
    7.3.4.5 Electrical Requirements .............................................................. 7–36
    7.3.4.6 Repairs ......................................................................................... 7–36
    7.3.4.7 Modifications ............................................................................... 7–36
    7.3.4.8 Ball Grid Array (BGA) Assembly ............................................... 7–36
  7.4 Backpanel PWB Assemblies .................................................................... 7–39
    7.4.1 Assembly Design ............................................................................... 7–39
      7.4.1.1 Terminals/Pins ........................................................................... 7–39
      7.4.1.2 Dimensioning ............................................................................ 7–39
    7.4.2 Manufacturing ................................................................................... 7–40
      7.4.2.1 Dimensions ............................................................................... 7–40
      7.4.2.2 Electrical Requirements ............................................................ 7–40
      7.4.2.3 Insertion/Removal Forces ............................................................ 7–40
      7.4.2.4 Plated-Through Hole Deformation/Damage .......................... 7–41

8. Equipment Sub-Assembly and Assembly Requirements ................................. 8–1
  8.1 General ..................................................................................................... 8–1
    8.1.1 Materials, Pieceparts, and Sub-Assemblies .................................... 8–1
    8.1.2 Sub-Assemblies and Assemblies ...................................................... 8–1
    8.1.3 Design ............................................................................................... 8–1
  8.2 Manufacturing ........................................................................................ 8–5
    8.2.1 Connections ..................................................................................... 8–5
      8.2.1.1 General ...................................................................................... 8–5
      8.2.1.2 Soldered Connections ................................................................. 8–5
      8.2.1.3 Solderless Wrapped Connections .............................................. 8–6
    8.2.2 Wiring and Cabling ........................................................................... 8–7
  8.3 Equipment Modifications ........................................................................... 8–8
    8.3.1 General ............................................................................................. 8–8

# Physical Design and Manufacture of Telecommunications Products

## Contents

### 12.3 Repairs
12-2

### 13. Qualification Test Procedures
13-1

#### 13.1 Corrosiveness of Soldering Fluxes
13-1

##### 13.1.2 Preparation of Fluxes for Testing
13-1

##### 13.1.3 Test Patterns For SIR and Electromigration Resistance Testing
13-2

- **13.1.3.7 Test Pattern Preparation - Liquid Fluxes**
- **13.1.3.8 Test Pattern Preparation - Solder Pastes**
- **13.1.3.9 Test Pattern Preparation - Cored Solder Wire**

#### 13.1.4 SIR Test
13-6

- **13.1.4.1 Equipment Required**
- **13.1.4.2 Test Procedure**

#### 13.1.5 Electromigration Resistance Test
13-8

- **13.1.5.1 Equipment Required**
- **13.1.5.2 Test Procedure**
- **13.1.5.3 Data Handling**
- **13.1.5.4 Visual Examination**

### 13.2 Polymeric Coatings and Adhesive Materials
13-10

#### 13.2.1 General
13-10

#### 13.2.2 Visual
13-11

#### 13.2.3 Adhesion
13-11

#### 13.2.4 Corrosion of Copper
13-12

#### 13.2.5 Test Patterns For Surface Insulation Resistance and Electromigration Testing
13-12

- **13.2.5.7 Test Pattern Preparation**

#### 13.2.6 Surface Insulation Resistance Testing
13-14

- **13.2.6.1 Equipment Required**
- **13.2.6.2 Test Procedure**
- **13.2.6.3 Data Handling**

#### 13.2.7 Testing for Resistance to Electromigration
13-16

- **13.2.7.1 Equipment Required**
- **13.2.7.2 Test Procedure**
- **13.2.7.3 Data Handling**
- **13.2.7.4 Visual Examination**

#### 13.2.8 Pre-Production Testing
13-18

### 13.3 Separable Connector and Socketed Component Lubricant Qualification
13-18

- **13.3.1 Lubricants for Gold-to-Gold or Similar Noble Metallizations**
- **13.3.2 Lubricants for Tin-to-Tin and Solder-to-Solder Separable Connections**

### 13.4 Qualification Test Procedures for Lap Soldered Modification Wires to PWB Assemblies
13-21

### 13.5 Qualification of Additive Circuitry for Bare PWB Modifications
13-22

### 14. Tests and Methods
14-1

#### 14.1 General
14-1

#### 14.2 Metal Finishes
14-1
14.2.1 Noble Metal Contact Finishes ...................................................... 14–1
14.2.2 Noble Metal Porosity Testing ...................................................... 14–1
  14.2.2.1 Electrographic Testing - Paper .................................... 14–1
  14.2.2.2 Electrographic Tests - Gel ............................................ 14–2
  14.2.2.3 Corrosive Gas Tests - Nitric Acid Vapor ..................... 14–3
  14.2.2.4 Finish Adherence ........................................................... 14–4
14.3 PWBs ............................................................................................................ 14–5
  14.3.1 Preparation of Cross-Sections ..................................................... 14–5
  14.3.2 Plating Thickness Measurement .................................................. 14–5
  14.3.3 Plated Finish Discontinuities ....................................................... 14–5
  14.3.4 Thermal Shock Testing of Plated-Through Holes ...................... 14–5
14.4 Insulation Resistance Testing ................................................................. 14–6
  14.4.1 Equipment Required ................................................................. 14–6
  14.4.2 Insulation Resistance Test Patterns ............................................ 14–6
  14.4.3 Terminating Test Patterns ........................................................ 14–8
  14.4.4 Test Procedure ................................................................. 14–8
  14.4.5 Data Handling ................................................................. 14–9
  14.4.6 Insulation Resistance Requirements ......................................... 14–10
14.5 Solvent Extract Conductivity Testing .................................................... 14–10
  14.5.1 Equipment and Reagents Required ........................................... 14–10
    14.5.1.1 Equipment ................................................................. 14–10
    14.5.1.2 Reagents ................................................................. 14–11
  14.5.2 Calibration Procedure ............................................................... 14–11
    14.5.2.1 Determination of Test Duration ................................ 14–11
    14.5.2.2 Determination of Contamination Threshold ............ 14–12
  14.5.3 Testing of Production PWBs and Assemblies ......................... 14–13

Glossary ............................................................................................................Glossary–1

References.................................................................................................... References–1
